PROJECT : CONSTRUCTION OF SERVICE ENTRANCE POST OF CROPS RESEARCH
BUILDING AND ENHANCEMENT OF ELECTRICAL POWER LOADS

LOCATION : DA-PREC MAIN STATION, STA. BARABA, PANGASINAN

GENERAL SPECIFICATIONS

○ MOBILIZATION AND DEMOBILIZATION

- The work shall consist of the mobilization and demobilization of the Contractor's forces and equipment necessary for performing the work required under the contract.
- Mobilization shall include all activities and associated costs for transportation of Contractor's personnel, equipment, and operating supplies to the site; establishment of offices, buildings, and other necessary general facilities for the Contractor's operations at the site; premiums paid for performance and payment bonds, including coinsurance and reinsurance agreements as applicable; and other items specified in Section 4 of this specification.
- Demobilization shall include all activities and costs for transportation of personnel, equipment, and supplies not required or included in the contract from the site; including the disassembly, removal and site clean-up, of offices, buildings and other facilities assembled on the site specifically for this contract.
- This work includes mobilization and demobilization required by the contract at the time of award. If additional mobilization and demobilization activities and costs are required during the performance of the contract as a result of changed, deleted, or added items of work for which the Contractor is entitled to an adjustment in contract price, compensation for such costs will be included in the price adjustment for the item or items of work changed or added.

○ CONCRETE WORKS INCLUDING RSB AND FORMWORKS

- Fine aggregates shall be clean, well graded, hard, natural sand or manufactured sand or a combination of both. The maximum size of the aggregates shall not be larger than one-fifth ($1/5$) of the narrowest dimension between forms and not larger than three-fourths ($3/4$) of the minimum clear spacing between reinforcing bars, and in no case larger than two inches in diameter. Coarse aggregates shall be hard, durable, uncoated gravel, crushed gravel, free from any deleterious materials like alkali, loam, silt and any organic matter.
- Water used in making the concrete mass shall reasonably clean, potable, and free from injurious number of oils, acids, alkali organic materials and other deleterious substances.

➤ Specified Compressive Strength

Class	psi	MPa
AA	4000	27.57
A	3000	20.68
B	2500	17.23
C	2000	13.78

- In placing concrete through reinforcement, care shall be taken that no segregation of the coarse aggregate occurs. On the bottom of beams and slabs, where the congestion of steel near the forms makes placing difficult, a layer of mortar of the same cement-sand ratios as used in concrete shall be first deposited to cover the surfaces.

RSB

- All reinforcement shall be placed in accordance with plans furnished by the Engineer. In case of any doubt or ambiguity in placing of steel, the Contractor shall consult the Engineer whose decision shall be final in such cases.
- All reinforcing steel bars used shall be new and free from rust, oil, defects, grease or links. All loose rust or scale, adhering materials and all oil or either materials which tend to destroy bond between the concrete and the reinforcement shall be removed before placing the steel and before concreting begins.
- All steel reinforcing bars shall be accurately placed and secured against displacement by tying them together at each bar intersection with Gauge No. 16 galvanized iron wire.
- Metal reinforcement shall be accurately placed and adequately secured by concrete or metal chair spacers. The minimum distance between the parallel bars shall be one- and one-half times the diameter for round bars and twice the side dimensions for square bars. In no case shall the clear distance between bars shall be less one or more than one and one-third times the minimum size of the coarse aggregates. Where bars are used in two or more layers, the bars in the upper layers at distance of not less than one inch.

FORMWORKS

- Provide forms that will produce correctly aligned concrete. Column forms shall be checked for plumpness before concrete is deposited. Hand holes shall be provided in column forms at lowest points of pour lifts to render this space accessible for cleaning.
- Immediately after the removal of the form, all projecting wires and bolts and other devices used for holding forms shall be cut off at least one-half centimeter beneath the finished surfaces. All holes and defects shall be thoroughly wetted and then painted up solid with cement putty mortar of the same proportions as the mortar used in the body of the work. All parts protruding beyond the

surfacing shall be treated in such manner as to effectively remove all the lines and marks impressed by the form works.

- Forms shall be removed in a manner which will prevent damage to the concrete and shall not be removed until the concrete has attained sufficient strength to support its own weight and any loads that may be placed on it. Side forms of beams and girders may be removed earlier than the bottom forms but additional posts or shoring must be placed under the beams or girders until they have attained their strength. Forms shall not be removed until approval of the Design Engineer. Any repair of surface imperfections shall be performed at once and airing shall be started as soon as the surface is sufficiently hard to permit it without further damage.

- **ELECTRICAL WORKS**

- The work to be done under this section of the specification consists of the fabrication, furnishing, delivery and installation, complete in all detail of Electrical Work at the subject premises and all work materials incidental to the proper completion of the projects, except those portions of the work which are expressly stated to be done by others. All work shall be in accordance with the governing Codes and Regulations and with the Specifications, except where some shall conflict codes, etc., which the latter shall then govern. The requirements in regard to materials and workmanship specify the required standard for the furnishing of all labor, materials and appliances necessary for the completed installation of the work specified herein and indicated on the drawings. These specifications are intended to provide a broad outline of the required equipment but are not intended to include all details of the design and construction.
- Performance test. It shall be the responsibility of the Electrical Contractor to test all items of the electrical installation for proper operational conditions. This condition shall apply to the power, lighting and auxiliary installation. Where sequence operation is required, the electrical contractor shall test for proper sequence and he shall leave the entire electrical installation in satisfactory working conditions.

1. Service Entrance Accessories

- The work shall consist of the installation of all service entrance accessories which are as follows:
 - Nema 3R 1000 Amp
 - THW/ THHN Wire 100mm sq.
 - Service Entrance Cap 4"
 - RSC Conduit 4"
 - Locknut 4"
 - Bushing 4"
 - PVC Elbow 4"
 - 0.30m x 0.30 x 0.30m depth manhole with 5mm manhole steel cover

- Strut channel and strut clamp

2. Automatic Transfer Switch

- The work shall consist of the installation of an Automatic Transfer Switch (ATS) 1000A in which its main purpose as a critical component of a functional power system, is to connect the electrical equipment in a facility to back up power in case the facility's primary power source goes down or fails. Implementing an ATS in the power system ensures that all machine that require continuous or near-continuous uptime continue operating even if there is a power outage or failure.

3. Secondary Line Requirement

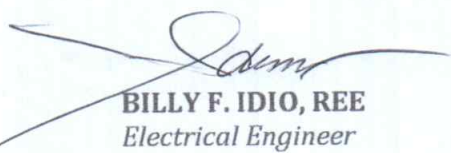

- The work shall consist of the installation of electrical wires from the electrical room going to various building structures and must be laid properly underground. Wires to be used should be with conduits. Sizes of electrical wires going to the buildings are as follows:
 - For Guest House #1, Chemical Room, Garlic Laboratory, Mushroom Laboratory and Motor pool, use **14mm sq. THW/ THHN Wire with 2" PVC conduits**
